Resources and Teaching Tools   Name:
                                               Topic:

All people don't learn well in exactly the same way. Teachers need to have different ways of opening up learning. Here are some that your team will want to use. (Some you will probably do as a whole "teaching team", and others may be led by 1-2 of you)

1. Direct them to internet sites you've found, and have them read, play animations, take notes. Every team will use the internet for part of their teaching.

2. Show them posters and diagrams, and explain to them what you've found about your topic.

**3. Do a "hands-on" activity, either an experiment that shows a process, or making a picture or model that helps their understanding. (some great ones use FOOD to model with)

4. Do slide show presentations, or show parts of videos, stopping it to explain important parts, and to have them take notes they need.

5. Do a mini-quiz after your activity.... 4-5 questions to check for understanding.
(write the questions or use those off the Final Exam... whichever is best)
6. Have students write/read short summaries.

7. Other ideas you think will work?? How do YOU learn best????_____

_____

_____

_____

>> Set aside special time in every activity to take questions and have discussion!
